

Rodrigo Dantas

Senior Software Engineer | Java/Python/Node/React | Banking & Fintech | LATAM + US

Sao Paulo, Brazil | +55 11 941-841-994

rodrigo.dantas@hustletech.dev | github.com/napalm23zero | linkedin.com/in/dantas-rodrigo

Senior engineer with 10+ years building Java/Python/Node/React systems for banking and fintech across Brazil and the US. Recent focus on applying LLM agents to operations and compliance workflows, including an incident intelligence system at a Tier-1 payments provider that automated the resolution of recurring incidents and cut MTTR by ~60% in three months. I'm looking for a senior IC or staff role where I can own a domain end-to-end and establish deep technical authority in it.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Operations, FiServ via Go2Win | Oct 2024 - Present

Sao Paulo, Brazil (Remote) | Banking and Financial Compliance

- Designed and built an AI-powered incident intelligence system where LLM agents generate optimized Splunk queries on demand and cross-reference a curated history of past incidents and RCAs. Within three months, ~70% of recurring incidents resolved near-automatically, reducing MTTR from ~45min to ~10min on tier-1 triage and freeing the team for higher-severity work.
- Led end-to-end investigations across the full transaction stack (Apigee, load balancer, NGINX, OpenShift, PCF, Java APIs, VMX mainframe), correlating evidence across layers and delivering remediation documentation that closed recurring root causes across multiple banking clients.
- Designed and developed RESTful APIs with OpenAPI and Swagger for banking, fiscal, and accounting compliance across Brazil and LATAM, integrating with downstream systems and serving as the contract owner across cross-functional teams during scope and integration definition.
- Operate independently across off-hours and weekend support rotations, identifying and resolving complex technical issues on systems and infrastructure components shared across multiple banking applications.

Senior Software Engineer, KIS Solutions | Sep 2022 - Sep 2024

Washington, USA (Remote) | Cross-industry Software Delivery

- Embedded within a team of 8 engineers across 5 concurrent client projects under Agile/Scrum, providing technical direction and reviewing pull requests alongside senior architects across fintech, retail, and internal SaaS domains, directly mentoring 3 junior engineers who were promoted to mid-level during my tenure.
- Designed and delivered full-stack solutions in Java, Python, Node.js, React, and React Native for iOS and Android, adapting the stack to each client's problem space and mentoring junior engineers through pairing, code review, and constructive feedback.
- Built and maintained applications on relational and NoSQL datastores, including PostgreSQL, MongoDB, and Redis, applying MVC and microservices patterns to keep services independently deployable and observable.
- Wrote unit and integration tests as a default part of delivery, integrating TDD practices and CI/CD pipelines to keep regressions out of production and reduce manual QA overhead.
- Built CDC and ETL pipelines with Node.js and Next.js to move and transform data across heterogeneous source systems, with built-in observability and replayability reducing data reconciliation incidents from a weekly occurrence to near-zero and eliminating manual data reconstruction.

Senior Software Engineer, MetalToad | Jun 2021 - Aug 2022

Oregon, USA (Remote) | Multi-client Software Delivery

- Delivered software projects for multiple US clients across diverse industries using Java, Python, React, C#, and Node.js, regularly switching context between codebases and business domains within the same week.
- Worked closely with clients across the full project lifecycle, gathering requirements, defining technical solutions, providing time and cost estimates, and ensuring timely delivery across concurrent engagements under Agile/Scrum.
- Acted as the technical bridge between non-technical stakeholders and engineering across N+ concurrent client engagements, translating ambiguous business needs into deliverable scope and surfacing risks early consistently delivering within committed timelines across the engagements I owned.
- Contributed to architectural decisions and technology choices on each project, balancing client constraints, timelines, scalability, and long-term maintainability while keeping delivery quality consistent across teams.
- Built and maintained services on AWS and Linux environments, integrating messaging and queueing patterns where appropriate to keep components loosely coupled and independently scalable.

EARLIER EXPERIENCE

Technical Lead, Opah IT (Internal Partner)	Apr 2021 - Jul 2022	Java, Spring, Redis, PostgreSQL, MongoDB
Senior Software Engineer, Banco BV (Opah Consultant)	Apr 2021 - Nov 2021	Java, Spring Boot, Apache Camel, system reliability
Technical Lead, Via Varejo (Casas Bahia)	May 2020 - Apr 2021	Node, Java Spring, Azure, MongoDB, Redis, Oracle
Senior Software Developer, UOL (Opah Consultant)	Oct 2019 - May 2020	Java, Kotlin, Quarkus, Apache Camel, TDD, Spock
Senior Java Developer, CVC (Opah Consultant)	Mar 2019 - Sep 2019	Java Spring, Kafka, ELK, Jenkins, Oracle, MongoDB
Software Developer III, ITBAM	Jul 2018 - Feb 2019	Java Spring backend, Android mobile
Software Developer, Tap4 Mobile	Sep 2016 - Jun 2018	PHP, Node.js, Java, Android, Objective-C

TECHNICAL SKILLS

Primary	Java 8 to 21 (Spring Boot, Quarkus, Apache Camel), Python (Pandas, FastAPI), Node.js
Frontend / Mobile	React, React Native (iOS and Android), Next.js, Angular
Cloud and Infra	GCP (multi-region, autoscaling), AWS (Lambda, SQS, SNS), Terraform, Docker, OpenShift, PCF
Data	PostgreSQL, Oracle PL/SQL, Redis, MongoDB, Firebird, DB2, Kafka
Pipelines	GitHub Actions, Jenkins, Harness, SonarQube, Fortify, Splunk, ServiceNow, Apigee
AI and Agents	LLM-powered agents for testing, code review, incident response, and documentation
Architecture	Microservices, multi-tenant SaaS, CDC and ETL, event-driven systems, OpenAPI and Swagger

OTHER EXPERIENCES

Founder and Software Architect, HustleTech Nov 2019 - Present
Personal projects portfolio Sao Paulo, Brazil (Remote) B2B SaaS 5-person team Profitable
- Architected and built a full-stack B2B SaaS from scratch: Java and Spring Boot microservices on GCP, React, React Native, PostgreSQL, Redis, Terraform, and GitHub Actions CI/CD across 12 paying clients.
- Applied LLM-powered agents internally for automated testing, architecture review, vulnerability scanning, and code quality enforcement, reducing code review turnaround.

EDUCATION

B.Sc. Computer Science, Universidade Estácio, São Paulo Jan 2022 - Jun 2026 (complete)
Coursework in algorithms, data structures, operating systems, computer networks, and software engineering
Speaker, 2020 Best Practices in RESTful API Development with Node.js and Swagger (1h) Universidade Estácio (online)
Speaker, 2021 MongoDB: What Problems Does It Actually Solve? (1h) Universidade Estácio (online)

LANGUAGES

Portuguese	Native
English	Fluent Interviews, presentations and negotiations with US and European teams
Spanish	Advanced Client work and conversations with teams in Mexico, Argentina and Colombia
